### File Geodatabase Feature Class

**Tags**  
U.S. Coast Guard, COTP

### Summary

The purpose of the data is to be used in Wildlife Tracking and Reporting Actions for the Conservation of Species (TRACS) as a resource tool in TRACS Mapper. The U.S. Coast Guard provided the boundary shapefile to the U.S. Fish and Wildlife Service (USFWS) Wildlife and Sport Fish Restoration (WSFR) Wildlife Tracking and Reporting Actions for the Conservation of Species (TRACS) team to be used as a resource tool in TRACS Mapper. TRACS stands for Tracking and Reporting Actions for the Conservation of Species. Wildlife TRACS is the tracking and reporting system for conservation and related actions funded by the US Fish and Wildlife Services (USFWS), Wildlife and Sport Fish Restoration (WSFR) Program.

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from the U.S. Coast Guard and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems. No geometry problems were identified. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors. The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced. Two double fields were added to the attribute table for the web mapper program: Area\_sq\_m and Len\_m. The geometry for these two fields was calculated using the World\_Cylindrical\_Equal\_Area projection. Two integer fields were added to the attribute table for the web mapper program: IS\_ACTIVE and IS\_DELETED. IS\_ACTIVE is populated with 1 (True) and IS\_DELETED with 0 (False). The layer was imported to the SDE Enterprise Oracle database using the SDO\_GEOMETRY spatial type.
