

Florida Fisheries-Independent Monitoring Diet Sampling Universe

Shapefile

Tags

Florida, Fisheries-Independent Monitoring Program, Diet Sampling Universe

Summary

This shapefile represents the spatial boundaries from where diet samples come for the state of Florida Fisheries-Independent Monitoring (FIM) program, and incorporate the spatial extent of various surveys that aren't funded by SFR.

Description

Florida Fisheries-Independent Monitoring Diet Sampling Universe

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from U.S. Fish and Wildlife Service and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems. No geometry problems were identified. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced.

Two double fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m. Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED. IS_ACTIVE is populated with 1 (True) and IS_DELETED with 0 (False).

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.
