

IDFG Wildlife Management Areas

File Geodatabase Feature Class

Tags

IDFG, WMA, management, lands, Idaho, fish, wildlife, hunting, fishing, Idaho Fish and Game, recreation, bird watching

Summary

This dataset was created as a continuation of the Idaho Fish and Game (IDFG) land ownership/management mapping project. It depicts all wildlife management areas (WMA) managed by IDFG.

Description

Various private, state, and federal entities have entered into agreements with or sold lands to IDFG for the management of the state's fish and wildlife. Each property agreement/lease/deed/easement/permit in Bob Martin's (IDFG) Lands database was mapped based on their legal descriptions. This dataset depicts those lands that make up IDFG's wildlife management areas (WMAs). Various layers were used to help digitize each area: township range section, geographic names, ITD roads, FS roads, hydrography, land ownership, county boundaries, etc. This shapefile was created by combining the mapping efforts of Pamela Bond and Angie Schmidt of IDFG and the Idaho Department of Lands. Much of the lands owned by IDFG or leased from IDL can be searched for viewed on the IDL website: <http://gis1.idl.idaho.gov>.

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from Idaho Department of Fish and Game and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems. No geometry problems were identified. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced.

Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED. Two geometry fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m.

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.
