Summary

Wildlife Management Areas (WMAs) are lands, either owned, leased, or managed through a formal agreement by the Nevada Department of Wildlife. WMAs are managed with the primary goal of preserving and enhancing habitat (primarily wetlands) for the benefit of game, non-game, and sensitive fish and wildlife species in Nevada and for public consumptive and non-consumptive user enjoyment.

Description

Wildlife Management Areas (WMAs) are established under the authority of NRS 501.105 and 501.181 that authorizes the Nevada Department of Wildlife to acquire lands, water rights, easements, and other property necessary for the preservation, protection, management, and restoration of wildlife and its habitat. The vast majority of existing WMA property was acquired for the primary purpose of protecting wetlands habitat critical to the survival of a variety of game, non-game, and sensitive fish and wildlife species throughout Nevada. WMA priority management goals are also driven by the funding source used to acquire the property. WMAs purchased with Wildlife Restoration funds are developed, maintained, and managed primarily for wetland values with the overall goal of no net loss of wetland habitat and the enhancement of wetland quality and quantity. These WMAs are also managed for waterfowl activities, including the use of these areas as public shooting grounds. WMAs purchased with Sport Fish Restoration funds are developed, maintained, and managed primarily for fisheries related values. Management of WMAs also includes development for the maximum recreational or other public use whenever and wherever feasible, but with the limits posed by the above reference priorities, within habitat capabilities, and as may be limited by budget constraints or regulations applicable to lands purchased using Federal Aid. Hunters and anglers benefit fish and wildlife by funding most of the WMA programs in the State of Nevada. Therefore, the hunting and fishing public shall continue to have priority standing in establishing the direction for future management and use of all the WMA system properties, when such lands were purchased with consumptive user derived funds. The WMA system will also be made available for educational, scientific, aesthetic and other nonconsumptive uses, whenever these activities can be accommodated without interfering with the primary purposes for which the areas were established, and without decreasing the opportunity or experience for consumptive users.

LEGAL CONSTRAINTS

LIMITATIONS OF USE

The Bureau of Land Management (BLM) provides these geographic data "as is." BLM makes no guarantee or warranty concerning the accuracy of information contained in the geographic data. BLM further makes no warranties, either expressed or implied as to any other matter whatsoever, including, without limitation, the condition of the product, or its fitness for any particular purpose. The burden for determining fitness for use lies entirely with the user. Although these data have been processed successfully on computers of BLM, no warranty, expressed or implied, is made by BLM regarding the use of these data on any other system, nor does the fact of distribution constitute or imply any such warranty.

OTHER CONSTRAINTS

Although this data is made available by the BLM Nevada State Office, no liability is assumed for the current accuracy or utility of the data on any system or for general or scientific purposes, nor shall the act of distribution constitute any such warranty for individual or aggregate data use with other data. The BLM shall not be held liable for improper use of the data described and/or contained herein. By using this data you hereby agree to these conditions.

SECURITY CONSTRAINTS

CLASSIFICATION unclassified

CLASSIFICATION SYSTEM This data layer contains unclassified information and does not contain sensitive information that might be withheld under the Freedom of Information Act (FOIA) and is generally considered releasable to the public.

PROCESS STEP ►

WHEN THE PROCESS OCCURRED 2014-11-25 00:00:00

DESCRIPTION

FWS WSFR TRACS team received the zipped shapefiles and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems and the one error was corrected using the Repair Geometry tool. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced.

Two double fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m. Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED.

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.
