

ODFW Wildlife Areas

File Geodatabase Feature Class

Tags

wildlife area, wildlife management, ODFW lands

Summary

To delineate boundaries for management of fish and wildlife resources on lands owned or managed by Oregon Department of Fish and Wildlife

Description

Wildlife management areas owned or managed by Oregon Department of Fish and Wildlife - some wildlife areas contain private inholdings that are not considered part of the wildlife area.

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from Washington Dept of Fish and Wildlife and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems and the three errors were corrected using the Repair Geometry tool. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced.

Two geometry fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m. Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED.

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.
