

Washington Wildlife Districts

File Geodatabase Feature Class

Tags

Wildlife Program Districts, Administration, boundaries

Summary

This feature class represents the Wildlife Program Districts for the state of Washington. It is used for show the areas of responsibility of the Wildlife Program District Biologists.

Description

Each Department of Fish and Wildlife region is divided into two or three Wildlife Program districts. There are a total of 17 WDFW Wildlife Program districts statewide. This feature class represents the Wildlife Program Districts for the state of Washington.

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from Washington Dept of Fish and Wildlife and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems. No geometry problems were identified. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were introduced.

Two double fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m. Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED.

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.

OVERVIEW DESCRIPTION ►

ENTITY AND ATTRIBUTE OVERVIEW

The information referenced in this feature class are the polygon areas determined by the Wildlife Regional Managers, This feature class is intended to show reproduction of the information relayed to the GIS unit from these individuals using the county24, sr24klrslines, dnr_mpl, and gmu06_border feature classes. The one non-ESRI feature attribute class, WPM_Num represent the Wildlife Program District Number assigned to the polygon.
