Summary

The Wildlife Area Unit Index is an index feature class designed to support cartographic operations using DS Mappbook by providing map series construction information (scale and orientation) for creating an 8.5 by 11 inch map. This feature class represents the first tier of the WDFW administrative hierarchy. This data is derived from the WDFW_Lands feature class and can be used to display the boundaries and areal extent of the grouping of properties that are designated as a Wildlife Area Unit administrative area. Not all of the lands managed by the WDFW have been designated as being within the administrative hierarchy. This feature class should not be used to illustrate WDFW lands managed for public access and use. The administrative boundaries contained in this feature class include lands where public access and use is not allowed. The features in this index layer are also attributed with the higher-level administrative designations that have been applied, the WDFW Statewide Region number, and the lowest level Sub-Unit designation. Not all of the lands managed by the WDFW have been designated as being within the administrative hierarchy. This feature class does not yet contain a complete representation of the entire real property estate and not all of the lands found in this feature class will be represented in the related index feature classes.

Description

The Washington State Department of Fish and Wildlife (WDFW) manages real property across the state for fish and wildlife, habitat conservation and wildlife related recreation. To support the effective administration of these lands, the agency applies a hierarchy of administrative designations. Individual property acquisitions may be grouped to represent the lowest tier of a three-tier hierarchy, the Wildlife Area Unit. Wildlife Area Units can be grouped to create Wildlife Areas; and Wildlife Areas can be grouped to form Wildlife Area Complexes.

Use limitations

This data was compiled at a scale of 1:100,000. Data should only be used for general display, mapping, and planning purposes at scales of 1:100,000 or smaller. These features do not represent legal boundaries and the data should not be used as a substitute for boundaries established by a licensed land surveyor. The intent of this data is to provide a spatial representation of the distribution and approximate location of lands managed by WDFW. WDFW had to rely on outside sources of information when compiling parts of these data, and

therefore cannot accept any responsibility or liability for errors and/or omissions in the use of these data. WDFW provides no warranties to accompany this data. Contact Washington State Department of Fish and Wildlife Regional offices for further information about departmentally managed lands.

DATA QUALITY REPORT - CONCEPTUAL CONSISTENCY ►

MEASURE DESCRIPTION

The polygonal feature class, Washinton State Department of Fish and Wildlife_Lands, is an amalgam of the dnr_mpl cover, WDFW historic owned and controled ArcINFO coverages (which tracked Washington Department of Fish and Wildlife ownership before 2001), and the Washinton State Department of Fish and Wildlifeupdate cover (which tracks Washinton State Department of Fish and Wildlife land acquisitions since 2001). The feature class was finalized in 2003 and land transaction updates since that time have been added directly into Washinton State Department of Fish and Wildlife_Lands. One Regional review was performed to get correct names and relationships to the administrative hierarchy (Wildlife Area Unit, Wildlife Area, and Wildlife Area Complex) for each Wildlife Area early in 2005. Updates involved two years worth of transactions updates and a review of all Wildlife Area unit boundaries within the state. Lands Information System (LIS) parcel data was been added since 2007 and Okanogan and Douglas Counties have been tranferred completely from the more accurate LIS.

DATA QUALITY REPORT - COMPLETENESS OMISSION ►

MEASURE DESCRIPTION

The position and titles of the Units have been reviewed and corrected by the Wildlife Area Managers who manage the land. Easements, hatchery sites, fishing or hunting access sites, and administrative land have not been reviewed and are known to be incomplete.

DATA QUALITY REPORT - QUANTITATIVE ATTRIBUTE ACCURACY ►

MEASURE DESCRIPTION

The data was compiled from Washington State Department of Fish and Wildlife and Washington State Department of Natural Resources pre existing covers. The information

was then shipped to the Regional Wildlife Area Managers for review and to determine correct WDFW sub unit (Unit), unit (Wildlife Area), and super unit (Complex) identification for each polygon. The base information ranged from an accuracy of 1:500,000 to 1:12,000 with the bulk of the information at 1:100,000

DESCRIPTION

FWS WSFR TRACS team received zipped shapefiles from Washington Dept of Fish and Wildlife and upon unzipping the file, the shapefile was imported into a file geodatabase in order to run topology and generalize the data. The Check Geometry tool was used to determine if there were any geometry problems which there were none. Topology was created in ArcCatalog using the default rule Must Be Larger than Cluster Tolerance. There were no topology errors.

The validated layer was generalized using the Simplify Polygon tool with the bend simplification and resolve topology error options. The generalized layer was exported to GCS WGS 84 and topology was recreated to confirm no additional errors were

introduced.

Two double fields were added to the attribute table for the web mapper program: Area_sq_m and Len_m. Two integer fields were added to the attribute table for the web mapper program: IS_ACTIVE and IS_DELETED.

The layer was imported to the SDE Enterprise Oracle database using the SDO_GEOMETRY spatial type.
